XOR Strings

Given two strings containing the digits 0 and 1, you have to XOR the two strings and print the resultant value.

To know more about XOR Click Here

Note: You can modify at most *three* lines in the given code and you cannot add new lines to the code.

To restore the original code in the editor, create a new buffer by clicking on the top left icon in the editor.

Input Format

The input consists of two lines. The first line of the input contains the first string, s, and the second line contains the second string, t.

Constraints

$1 \leq |s| \leq 10^4$
$|s| = |t|$

Output Format

Print the string obtained by the XOR of the two input strings in a single line.

Sample Input

```
10101
00101
```

Sample Output

```
10000
```
